

# Anatole HAGBE

Software Engineer → **Junior DevOps / Cloud Engineer**

ahagbes89@gmail.com | <https://hanatole.github.io> | <https://gitlab.com/hanatole> | Abomey-Calavi, Benin

★ KCNA

★ AWS Cloud Practitioner

★ AWS Solutions Architect – Associate

## PROFESSIONAL SUMMARY

Software Engineer with 5+ years building production-grade applications, now transitioning full-time into DevOps and Cloud Engineering. Earned KCNA, AWS Cloud Practitioner, and AWS Solutions Architect – Associate certifications while designing and deploying self-hosted infrastructure environments featuring Kubernetes, Docker, Terraform, Ansible, and GitLab CI/CD. Brings an automation-first mindset honed through years of scripting, pipeline design, and Linux administration. Passionate about cloud-native practices, infrastructure reliability, and closing the gap between development and operations.

## TECHNICAL SKILLS

|                            |                                                                    |
|----------------------------|--------------------------------------------------------------------|
| <b>Cloud / AWS</b>         | EC2, S3, VPC, IAM, Route 53, CloudWatch, RDS, Lambda               |
| <b>Containers</b>          | Docker, Docker Compose, Kubernetes (kubect!, kubeadm), Helm        |
| <b>CI/CD</b>               | GitLab CI/CD, GitHub Actions, Jenkins, ArgoCD                      |
| <b>IaC / Automation</b>    | Terraform, Ansible, Bash, Python                                   |
| <b>Monitoring</b>          | Prometheus, Grafana, Loki, ELK Stack                               |
| <b>OS &amp; Networking</b> | Linux (Ubuntu/CentOS), DNS, HTTP/S, Nginx, SSL/TLS, Load Balancing |
| <b>Programming</b>         | Python, Go, Java, C++                                              |
| <b>Version Control</b>     | Git, GitHub, GitLab                                                |

## DEVOPS PORTFOLIO PROJECTS

### End-to-End CI/CD Pipeline *GitLab CI/CD · Docker · Ansible · DigitalOcean*

- Designed a multi-stage pipeline (lint → test → build → deploy) eliminating manual deployments; reduced release time from 45 min to under 8 min.
- Containerized a Python /PostgreSQL application with Docker Compose and provisioned DigitalOcean droplets with Ansible playbooks, achieving zero-downtime blue-green deployments.

### AWS Infrastructure as Code *Terraform · AWS VPC · EC2 · RDS · S3 · CloudWatch*

- A Terraform-provisioned AWS infrastructure for a Go-based BMI web application featuring custom VPC design, secure EC2 deployment, Nginx reverse proxying, and systemd-managed service lifecycle.
- Provisioned a production-grade serverless AWS environment using Terraform, implementing Infrastructure as Code for a feedback application with secure PDF uploads, event-driven notifications, and automated CI/CD deployment pipelines.

### Observability Stack *Prometheus · Grafana · Loki · Alertmanager*

- Deployed Prometheus + Grafana via Helm on Kubernetes, creating 12 custom dashboards tracking latency p99, error rates, and pod resource utilization.
- Integrated Loki for centralized log aggregation across all services; configured Alertmanager to route critical alerts to Slack within 30 seconds of threshold breach.

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer — Foxtech Benin. *Oct 2023 – Sept 2025 Cotonou*

- Designed and deployed secure RESTful APIs for FTTH and FTTE access order services, supporting thousands of concurrent users
- Containerized backend services with Docker to standardize development and production deployment environments.

## EDUCATION

Master Computer Science — University of Abomey Calavi

May 2019
